

Pharmaceuticals Found In Drinking Water...

Drinking Water: AP's investigation turned up **antibiotics, anticonvulsants, mood stabilizers, sex hormones, anti-anxiety drugs, acetaminophen and ibuprofen in trace amounts.** Many people did not realize that the unused pills dumped into toilets, and medications excreted through our **URINE and HUMANE WASTE.**

Pharmaceuticals are not removed and enter our water system... By
Associated Press Renee Cho

...Dr. Christian Daughton (Chief Chemist at the E.P.A.) found the six APIs highest concentrations are:

- Ibuprofen, triclosan - from deodorant & toothpaste
- Viagra, painkillers, mood-stabilizers
- Anti-Fever drugs, herbicides, acetaminophen
- Cholesterol Drugs, etc...

AP reported that small amounts of *medication affected human embryonic kidney cells, human blood cells and human breast cancer cells.* Other effects may not be detectable, but even low doses could lead to subtle changes over the long term.
